FOREWORD

IN publishing this book of "Homes" in the interest of prospective home-builders, the author has endeavored to cover a wide variety of designs and plan arrangement for both the smaller and larger type of homes of today.

In the planning of any home, a prerequisite of the utmost importance in the preparation of the plan is its location. A perfectly good plan on one site may be unsuited for another. The homes illustrated offer a wide range of choice in the selection of a residence suitable to its location and pleasing to the owner.

The designs have been planned with a view to economy in the construction and to avoid waste space. In most cases, building materials for the exterior may be changed to others than shown without destroying the architectural effect. For example, a house shown of stucco can be modified for brick or shingles, or vice versa. Plans can also be reversed to suit another exposure, as may be required by the building site.

Many of the designs shown for the smaller type of homes will be found fitting for the particular site to be improved with but slight modifications in the working plans, which are available.

It is not expected that the designs herein illustrated will cover the exact requirements of the prospective home-builder for the larger type of homes, or be exactly suitable to the particular site to be improved, without some changes. The designs shown are intended as suggestions and as a basis upon which to model the contemplated home, that it may be a successful one, both in regard to covering the requirements of the owner and also fitting for its location.

No attempt has been made to give the cost of building any of the houses shown, because building costs and conditions vary greatly in different sections of the country.

Complete working-plans and specifications are among the essentials required in the building of a home. These are often neglected in the construction of the small house, and too much is left to the imagination on the part of those involved.

The usual programme in building a house after plans and specifications are secured is to invite two or three contractors of good standing to make a proposal for the work.

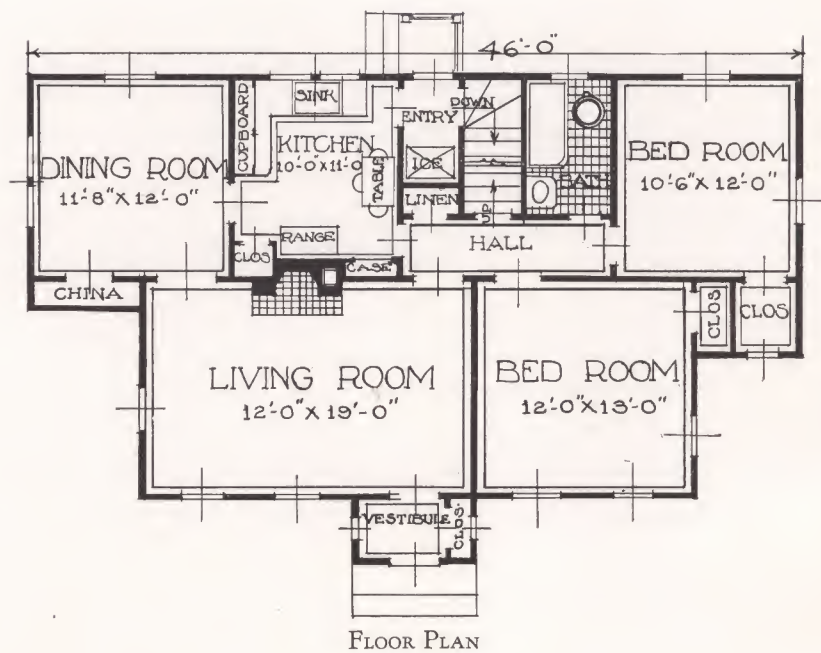

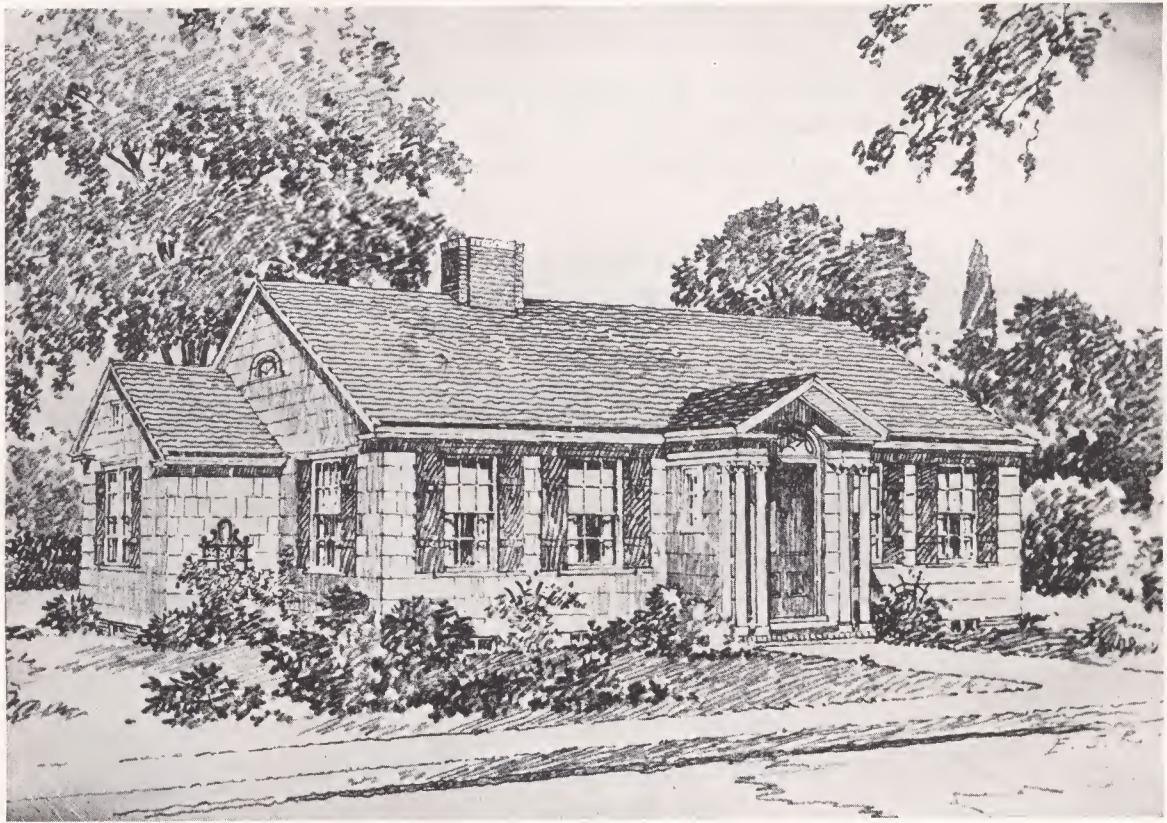

It is the aim of the author of this book not merely to present these designs to the home-building public, but also to render a helpful service, and he will co-operate with the reader in any home-building problem, be it a small or a large house that is planned.

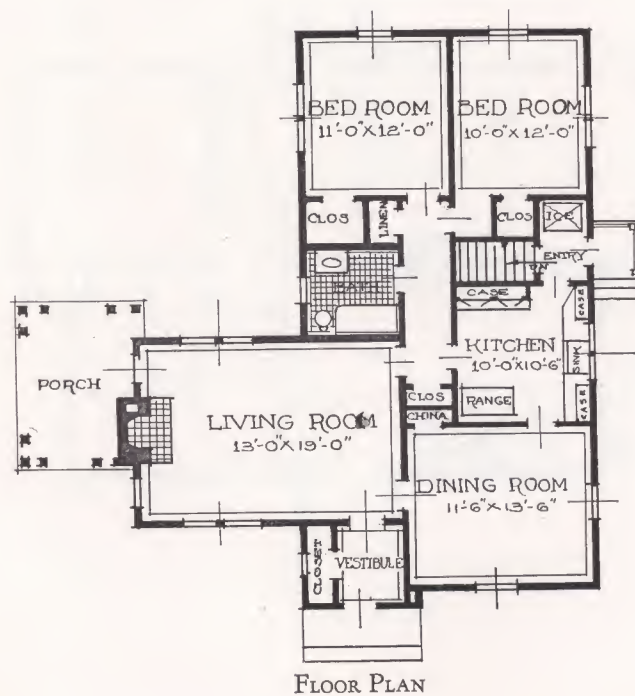

Information relative to any of the designs shown in this book may be secured by writing to the author at 101 Tremont Street, Boston, Massachusetts.
